

INSPIRED SECURITY

Activa 300. Modern Access Control

Activa 300 is a high performance, cost-effective, wire-free access control system designed to offer a flexible solution capable of meeting the demands of today's ever changing working environment.

Activa 300 delivers a user friendly intelligent locking solution for any door made of glass, metal, timber or composite materials. The management software allows the site administrator to make quick and easy access right changes across single or multiple sites ensuring security and safety is never compromised.

Benefits.

Modular Security

Activa 300 is fully scalable, allowing future expansion to be achieved with ease.

Flexible & Easy Implementation

Whether installing on new or existing doors Activa 300 is a cost effective access control solution.

Adaptable & Hygienic

Available in a range of attractive finishes and styles. Activa 300 can include the latest anti-bacterial coating where hygiene is of the utmost importance, eg hospitals and care facilities.

User Focused

Operated using a choice of authorised credentials: user card, fob, wrist band or intelligent key.

Environmentally Friendly

Low energy consumption battery powered unit* makes it an ideal environmental solution.

*Not including the wall reader.

Activa 300 Wall Reader.

Our Activa 300 wall readers are fully compatible with any access control application. They can be used in new systems or replace existing readers to become part of the access control management system. Available as proximity only, keypad only or a combination of proximity and keypad.

Operated using a choice of authorised credentials

Administered by a stand alone card system through to a wireless networked management system

Activa 300 Credentials.

Insafe provide a choice of credentials to suit your organisation or users needs. Ranging from a simple user card through to the intelligent key which is designed to incorporate your proximity credential within associated mechanical keys.

The credentials are available in two technologies:

HiD iClass - where credential integrity and security is of the upmost importance.

MiFare - one of the most widely used formats available making it ideal for environments where utilisation of existing site credentials is a preference.

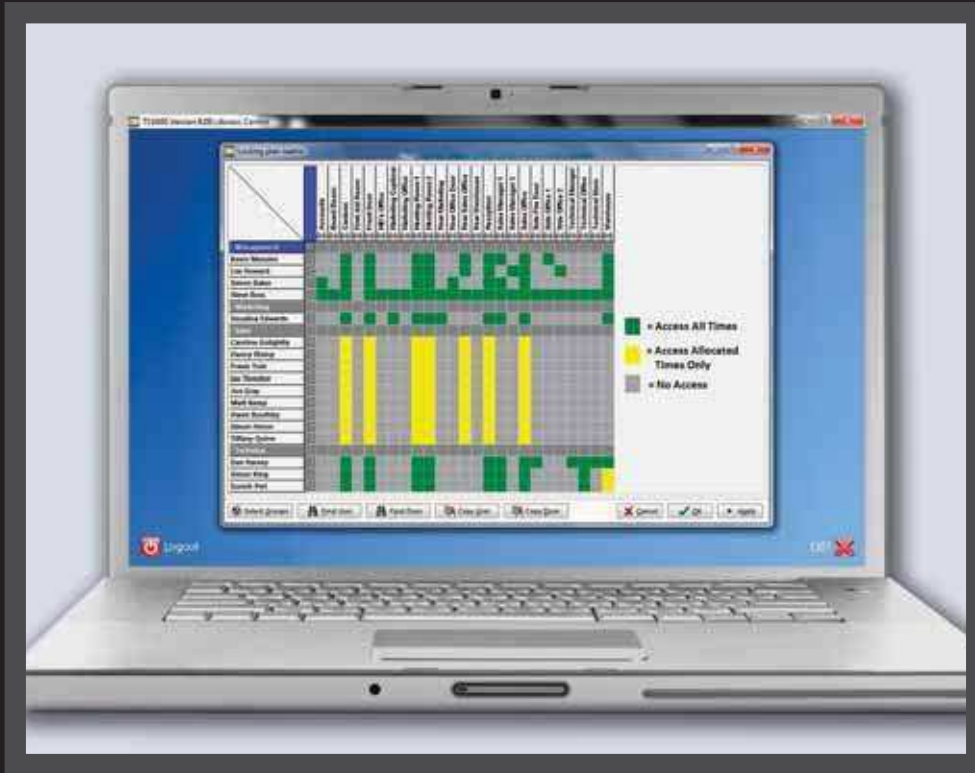

Card • Fob • Wristband • Intelligent Key

Activa 300 Management & Software.

Insafe offer a variety of access control management tools that are designed to suit your needs.

Our entry level system is administered locally by management card to program doors with the option to add or delete single or multiple users.

For administrators requiring more flexibility, management is available through dedicated software as both an offline or networked solution. The offline version involves programming to be done locally at the door with a programming device to change users access rights and retrieve audit trails.

The networked option connects the doors through the local area network without the need to run cabling to the door - perfect for sites that require 'real time' monitoring and audit trails, plus the ability to remotely unlock and lock doors from a computer.

The Activa 300 software is simple to operate and gives the administrator flexibility and control to:

- Add, delete and modify users
- Add, delete and modify doors
- Change users authorisations to doors
- Add, delete and modify time zones for users
- Interrogation of cards or fobs
- Automatic timetabled operation of doors ie. the door automatically opens at 9am and closes at 5pm
- Audit trail from doors
- Audit trail of software administrators
- Detailed printable reports
