

Activa IQ. Intelligent Access Control

User-friendly, smart access control using intelligent keys.
No wiring required - the power is in the key.

Activa IQ is a high security electro-mechanical locking solution that gives you real control over all your access points. It allows you to communicate with your entire locking system through micro-technology that is embedded into cylinders, padlocks and keys.

As a wire-free system, Activa IQ is easily fitted without the need for any special preparation. Its intuitive interface allows you to enable and disable authorisations as needed for specific time periods. And through its reporting and audit features, you'll know who went where and when.

It is also very flexible, with a wide range of system management options, in addition to being easily incorporated into other high security mechanical platforms and intelligent high security alarm padlocks.

Activa IQ uses advanced technology to enhance every aspect of access control and lock system security with flexibility, convenience and high security in mind. Depending on your environment's specific needs, the platform can be managed in a variety of ways including remotely or from your computer.

Benefits.

Add Access Control Anywhere

Available in multiple formats, cylinders and padlocks - access control wherever you need it.

Easy to Deploy

Designed for simplicity and flexibility, Activa IQ is a wire-free solution and doesn't require any special site preparation.

Cost-effective

Securely repurpose cylinders and keys and can also be integrated with mechanical systems.

Scalable to Any Environment

Activa IQ's simple wire-free design can scale to any size as you add more access points.

Intuitive Software

Activa IQ is easy-to-program and easy-to-operate.

Remote Management

Change access rights, enable and disable keys, customise access schedules from your computer.

Features.

Reporting Features and Audit Trails

Know who, when and where any connected location has been accessed.

Flexible Control Options

A variety of devices to give you control:

Web-based management from your PC; Wall programming device; Portable programming device

Secured Communication

Powered by trusted technology, Microsoft SQL server databases together with SSL certificates.

Revalidation for Reduced Risk

Instruct the system to require revalidation from any key to provide time-limited controlled access.

High Security Protection

Activa IQ adheres to the world's most stringent standards.
