## ACTIVA® ONE

Electronic Pushbutton Commercial Lock

The Insafe Activa One is a smart vandal resistant standalone lockable handle which is self-powered requiring no batteries. The lock is managed by keypad programming, eliminating the need for additional electronic devices and wiring through the door.

The Activa One has PIN access removing the need for keyfobs or magnetic cards and any associated costs with lost or stolen credentials making this a cost effective solution for any business.

The user-friendly design has audio visual indicators notifying users when access is granted or denied. Administration is straightforward with the lock allowing for multiple users and up to 100 available codes. With optional software, audit trails can be generated to review the last 1000 events including the use of mechanical key override.

INSAFE.COM

The lock comes with five different authority levels that allow users to have access to specific lock functions:

---

**Master Level**

Performs all set up and programming functions

---

**Manager Level**

Administers common programming functions

---

**Access User Level**

Entry is granted with a valid PIN

---

**Service Level**

Codes for a single event or a single day which can be programmable in advance

---

**Maintenance Level**

Information can be uploaded to or from the lock without access being granted

---

The Active One offers an optional key override, anti-tamper lockout and a number of operational modes including full lockout and pre-programmed re-locks.

Active One is pre-assembled for left hand door installations though easily reversed in the field. It is available in satin chrome with the option of both satin brass and dark bronze finishes.

## Applications

---

Interior and Private Offices

---

Storage Rooms

---
