Guardian Key Track Pro 24
Electronic Key Storage

The Guardian Key Track Pro is an efficient, safe and secure key storage management solution helping businesses keep track of their keys to improve security and reduce costs.

The Guardian Key Track Pro is designed to allow an authorised person access to the cabinet via the key pad. Their unique log-in code will open the door, illuminate the key(s) associated to that log-in and unlock them for removal.

To return the key simply scan the barcode on the intelligent key ring in the integrated barcode reader - the door will open and key position will light up in the cabinet.

The full audit trail and inventory in the Guardian Key Track Pro will keep a real-time log of all issued and returned keys - your key inventory will always be up-to-date.

Benefits

Fully automatic key issue and collection, no human supervision required

Easy configuration by enhanced webbased software

Improved security: restricted access in time and space

Contactless and equipped with barcode technology

Intelligent key ring available as a wired seal for high security environments and as a reusable hasp version for infinite re-use

Integration with existing access control systems, proximity cards, swipe cards and/or biometric readers
